

How to assemble a sign holder

1. The component parts!
Sign holders frame, 'Correx-type'
board, 2 angled feet and number
holder

2. Insert the board into the slot on
the side of the frame

3. Holding frame in one hand, tilt
foot slightly towards the small
projecting stub until clip hooks onto
frame ridge.....

4.....ease foot backwards until the rear
part of the 'clip' snaps onto the ridge
on the other edge of the frame.

5. The foot in the correct position,
clipped onto the ridge on both sides
of the frame.

6. Then exactly the same for the
second foot - sure they both point
the same way!

7. Attach the number clip onto the
opposite side of the frame to the feet
- small clip hooks onto ridge of
frame - both sides
